## EDUCATION

**University of Lagos — Lagos, Nigeria**

*Expected: August 2028*

*B.Sc. Computer Science*

**Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Systems Analysis & Design, SDLC & Agile Methodologies

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, SQL

**Frameworks/Libraries:** React, NestJS

**Databases:** PostgreSQL, Supabase

**AI/Dev Tools:** GitHub Copilot, Claude, OpenAI API, Cursor

**Tools & Platforms:** Git/GitHub, Vercel, Railway, Prisma

## PROJECTS

**StockPulse — React, TypeScript, NestJS, Prisma, Supabase**

[GitHub](#)

- Built a full-stack inventory management system, designing the database schema in Prisma and implementing RESTful APIs in NestJS for inventory tracking, stock updates, and reporting
- Implemented authentication and multi-user data access using Supabase, securing inventory data across user roles
- Deployed and debugged a production system end-to-end (React/TypeScript frontend on Vercel, NestJS/Prisma backend on Railway), resolving connection pooler configuration issues, Prisma migration conflicts, and TypeScript strict-mode errors

**EduNav — React, Supabase, PostgreSQL**

[GitHub](#)

- Built a campus study space finder that helps students locate and review available study spaces in real time using Supabase Realtime subscriptions
- Optimized performance by moving vote aggregation to a server-side Postgres RPC function, cutting client-side computation load
- Reduced unnecessary re-renders and improved upload responsiveness through React.memo component decomposition and asynchronous photo encoding via FileReader
- Added in-memory rate limiting to prevent abuse on key user actions

## EXPERIENCE

**Digital Services Officer — MultiChoice Group (Part-time, Remote)**

*Jan 2025 – Mar 2025*

- Activated and managed Showmax subscriptions for customers through the MultiChoice/DSTV self-service platform, including account linking and subscription verification
- Navigated the MultiChoice online subscription merchant portal to guide users through plan upgrades, billing activation, and subscription management
- Resolved technical issues including OTP delays, login failures, and account errors to ensure smooth onboarding
- Maintained accurate activation and customer interaction records while delivering consistent customer satisfaction

**FlyRank — Backend Engineering Intern (Backend AI Engineering Track)**

*July 2026*

- Selected for FlyRank's self-paced Backend AI Engineering track; designing and shipping a backend service with defined API contracts, structured outputs, and error handling
- Developing a service architecture spanning data pipeline design, structured-output generation, and automated evaluation against a quality rubric
- Applying AI-assisted engineering workflows across design, implementation, and evaluation

## ACHIEVEMENTS & EXTRACURRICULAR

**ShieldPay — Squad Hackathon 3.0 (HabariPay/GTCO), Team Sentinel** [GitHub](#)

*May 2026*

- Frontend Developer in a 4-person team; built the real-time fraud detection dashboard for an ML pipeline (IsolationForest + XGBoost) and Groq Llama 3.3-70b LLM investigation agent
- Built the full admin dashboard and merchant portal — live transaction feed with 5-second polling, model accuracy gauge, fraud pattern breakdown charts, and an investigation log drawer per transaction
- Engineered real-time polling logic managing 7 concurrent data streams without race conditions

**Whispr — Claude Builder Club Hackathon 1.0** [Bot](#) [Mini App](#)

*April 2026*

- Frontend Developer & Team Lead; built a Telegram bot converting natural language into scheduled reminders using NLP-based parsing (chrono-node)
- Architected the event-driven backend (Node.js, Express, MongoDB, Redis/Bull) with idempotent message handling, retry with exponential backoff, and a dead-letter queue for failed notifications
- Built the companion Mini App dashboard (React 19, Vite, Telegram Web App SDK) for managing reminders inside Telegram
